

Photo Alphabet

PHOTOGRAPHY PROJECT

You can do this photography project inside or outside anywhere.

What You Need: Any camera or phone camera.

How to do it.

Look at the example photos below and notice how the shapes of the letters have been created by carefully framing and photographing objects, or parts of objects that appear to have a shape similar to a letter of the alphabet. For example, looking down at the top of a cup, the circle shape can be the letter **O**. Framing the corner of a table can make the shape of the letter **V**.

Your challenge is to look creatively at things to find anything or part of any object that has a letter shape in it. It's tricky to begin with, but the more you look the more you will start to find. Look at objects at different angles and viewpoints. Look close-up and far away. You could challenge yourself to find the whole alphabet or find the letters to make up your name.

When you have all of your photos you could print them out or arrange them on your computer. Either way, you could then share them on social media or your wall.
